

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

Claims 1-8 (cancelled).

9. (New) A fastening assembly, comprising:

- a first component having a threaded bushing;
- a second component having a keyhole-like cut-out including a larger opening and a smaller opening; and
- a bolt configured to be screwed into the threaded bushing in such a way that the bolt can be guided with the head through the larger opening of the cut-out and the head engages behind the smaller opening of the cut-out for fastening, the bolt having engagement surfaces for a tool at an end of the shank, wherein the head is round and has a smooth surface.

10. (New) The fastening assembly as recited in claim 9, wherein the engagement surfaces have a form of one of an external toothing or an external polyhedron.

11. (New) The fastening assembly as recited in claim 9, wherein the shank of the bolt has a left-hand thread.

12. (New) The fastening assembly as recited in claim 9, wherein the bolt is self-locking.

13. (New) The fastening assembly as recited in claim 9, wherein the bolt has a coated thread, the self-locking being achieved via the coating.

14. (New) The fastening assembly as recited in claim 12, wherein the bolt has a thread configured to be thread-forming for a corresponding bushing, for the self-locking.

15. (New) The fastening assembly as recited in claim 9, wherein the first component includes a translation guard configured to prevent a translatory movement of the first component when fastened.

16. (New) The fastening assembly as recited in claim 9, wherein the first component includes a rotation guard configured to prevent a rotational movement of the first component via the second component when fastened.
